

Truth in science.
Transformation in medicine.

At Vera Therapeutics, we pursue truth in science to transform medicine in autoimmune diseases, starting with the kidney.

Our research is grounded in expertise in nephrology and B-cell biology, and focused on areas of high patient need.

8 trained
nephrologists

4 clinical
trials

Truth in science.
Transformation in medicine.

Physician-led, patient-focused

Marshall Fordyce, MD: Founder and CEO

Dr. Fordyce began his career as an infectious disease clinician and has over 15 years of experience in drug discovery, development, and commercialization.

Our values

Empathy is our foundation

Empathy is as essential to what we do as the science is. We listen to patients and physicians, so their truths shape our work.

Owner's mindset

We own our actions and hold ourselves and each other accountable. We speak up when something's not working, then help to make it right.

Demand clarity

We ask the hard questions and make clarity a priority, so everyone is aligned on what we're doing and why.

No fences

We are engaged and willing to be challenged in our thinking. We pitch in and help each other succeed as a cross-functional, unified team.

Execute with urgency

We move fast and with purpose because lives depend on it. Every day counts for the people we serve.
